

SUMMIT

HOME

The *Summit Design* presents a contemporary two-storey home concept combining functionality with modern comfort. The layout features open-plan living and dining spaces that flow seamlessly into a generous kitchen and courtyard, creating a bright and social ground floor environment. Two bedrooms—including a spacious master suite with ensuite and walk-in wardrobe—are located upstairs for privacy, complemented by multiple bathrooms. A double garage, efficient circulation through hallways and stairwell storage, and a balanced mix of form and proportion make this design both practical and visually refined. The clean elevations and cohesive roofline tie together a modern, livable aesthetic ideal for a family home.
